

RFID SI AG

A Silver Partner of the METRO Group Future Store Initiative

The new systems integrator RFID SI AG brings together extensive knowledge of business processes in the food industry and in-depth RFID expertise. The company's entrepreneurial goal is to streamline food industry processes using RFID applications. Its solutions enable food producers to fulfill the RFID labeling requirements made by major retailing corporations. RFID SI AG offers its clients a standardized modular solution, called RFID Shifter, which the company customizes to achieve 100% fit with client business processes. RFID Shifter is a state-of-the-art, process-oriented middleware system that combines process functionality with seamless process integration. Based on a modular workplace concept, it serves as an ideal and user-friendly extension to existing ERP and merchandise management systems.

RFID Shifter: RFID in a box

RFID technology can be used to rationalize a wide variety of operational processes, including packaging, storage, retrieval and transfer of stocks, order picking and shipping. RFID SI AG enables a fast and efficient rollout by lending clients end-to-end support in comprehensive RFID labeling initiatives ranging from pallets to product packaging. To meet the special requirements of METRO Group and REWE, each solution can be delivered complete with EDI extension.

The integrator's service portfolio includes a range of different RFID Shifter solutions: 'Slap & Ship,' for example, is designed specifically for labeling pallets bound for METRO Group and REWE, while 'Pallet Labeling' can be

deployed for marking all pallets used by a particular manufacturer – a powerful tool for optimizing internal processes. And implementing the all-encompassing RFID Shifter Case and Pallet Labeling solution means that clients achieve the highest possible level of RFID penetration and realize best-in-class optimization.

Selected products and services

The RFID Shifter Slap & Ship QS workplace

The innovative workplace concept developed by RFID SI AG was designed with customer requirements and optimal process support in mind. The company's current development focus is on the completely redesigned version of the RFID Shifter Slap & Shift QS workplace which uses a QPoint device to test the far-field readability of RFID transponders while they are being attached to items – it is in fact the first ever automatic quality control that ensures the correct RFID labeling of shipments. RFID SI AG developed this solution together with the EECC and Avery Dennison at the suggestion of METRO Group. The RFID Shifter Slap & Ship QS workplace can be operated as a standalone solution or integrated into existing ERP systems.
